

GAME REVIEW

Title: Astro Bot Rescue Mission

Age Rating: E

Gaming System: PS4 (VR)

Teen Difficulty Rating: 3/5

Teen Rating: 4/5

Description:

This video game is PlayStation exclusive and centers around a group of robots that live in outer space. The main robot (the one you play and control) is named Astro, and he has been separated from his friends. An alien attacked all of his robot friends, and they are scattered around 5 different worlds, and it is up to you to find them all and complete the levels. Each world has its own terrain that ends with its own boss that you must fight in order to advance. This game uses a Virtual Reality headset, as well as the dual shock 4 controller, which creates a surreal experience. As you complete each world and round up lost robots and collect coins, you unlock new things to do.

Favorite or Least Favorite Part:

My favorite part of the game was that if you found a certain hidden feature in the levels, you were rewarded with a special side mission. By the time I finished all 5 worlds, I had countless side missions to complete, giving me even more fun things to do!
